Top 5 Ways Key Management Saves Money & Improves Efficiency

5 Ways Key Management Saves Money & Improves Efficiency

01

Improves Utilization

02

Reduces Fleet Size

03

Reduces Labor Costs

04

Reduces Personal Vehicle Expenses

05

Secures Assets

Additional Benefits

Fewer Idle Vehicles

Easier access to efficiently shared fleet reduces the need for permanently-assigned vehicles – slashing even more expenses.

24 x 7 Access

Enables weekend and off-hour key access, around the clock. Key coordination and use among multiple drivers is automated, so sharing is efficient!

Accurate Billing

Vehicles can be dispatched and returned multiple times per day. This encourages drivers to bring back vehicles as soon as they are done to minimize charges. Key pick up and return is tracked down to the second. This results in better utilization, and ultimately, fewer vehicles.

Improves Utilization

Effective key management can help organizations optimize vehicle usage, ensuring that each vehicle is used to its full potential. Improved utilization means vehicles can be used multiple times per day, around the clock. This can reduce the need for additional vehicles and maximize the return on investment (ROI) for each vehicle. With more efficient vehicle usage, organizations can save money and increase productivity.

Reduces Fleet Size

Key management can also help organizations reduce their fleet size. By using fewer vehicles, organizations can save money on vehicle purchases, maintenance, and insurance costs, as well as reduce their environmental footprint. By optimizing vehicle usage, organizations can identify areas where they can reduce their fleet size without sacrificing operational efficiency.

Reduces Labor Costs

Key management systems can help organizations reduce labor costs by automating many administrative tasks, such as vehicle tracking and maintenance scheduling. This can free up time for employees to focus on other tasks, increasing productivity and reducing labor costs.

Reduces Personal Vehicle Expenses

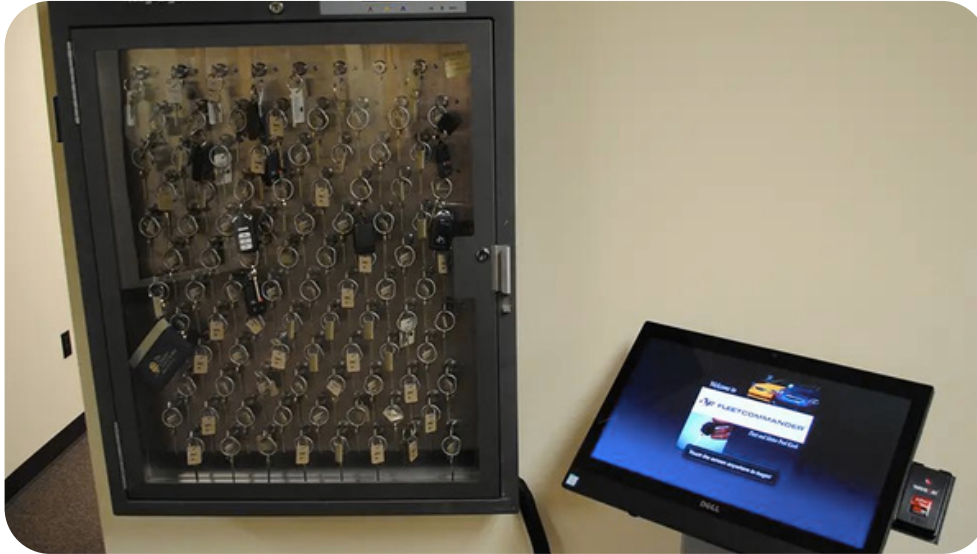

When employees use personal vehicles for work-related tasks, it can lead to increased expenses for both the employee and the organization. By providing a secure and efficient way to manage company vehicles, key management systems reduce the need for employees to use their personal vehicles for official business, resulting in lower expenses for mileage reimbursement, maintenance, and insurance.

Secures Assets

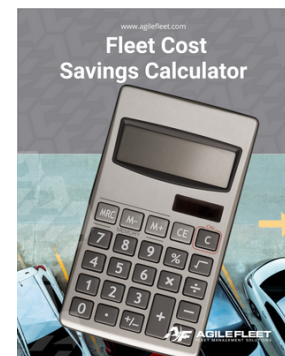

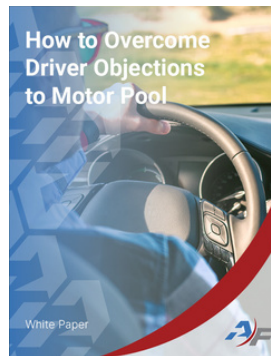

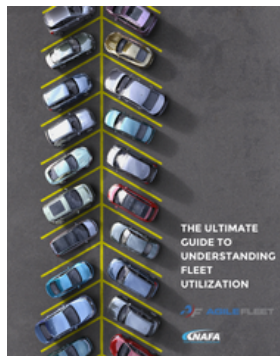

Key management systems can help organizations secure their assets, preventing theft and unauthorized vehicle use. By ensuring that only authorized personnel have access to vehicles, organizations can reduce the risk of vehicle theft and damage, as well as prevent unauthorized usage that can lead to additional expenses. No more lost keys or fuel cards!

A Fleet Key Management System You Can Trust

Our fully configurable touchscreen functionality with optional keyboard makes key access as easy as getting an airline boarding pass.
